Subject: Structural Analysis and Wind Loads

John and Team,

Hope you had a good week. I wanted to follow up with the wind load report mark ups and see if you had some feedback on that? Also, I wanted to ask about the structural calcs. In our last call we did not discuss this much but would like to hold another meeting to better discuss our analysis. We would like to confirm our approach so we can update our interior row analysis and finalize the design in preparation for the aeroelastic wind tunnel test. Would be nice to confirm our calculations on the exterior row design so we can compare with CPP results on the pluck test and aeroelastic screening report.
